

## Bench Top Shielding Products

### Modular Interlocking Bench Shielding (MIBS)

MIBS, the smart progression from lead bricks. MIBS are the specially designed shielding product that was developed by Inderlec Medical Systems.

Ideal for shielding around viewing barriers or any other object that requires additional shielding

These special interlocking shields have no exposed lead nor do they have the stability issues that the old lead bricks had. The shields come with 10mm lead but can be made to accommodate up to 60mm lead.

**Standard sizes are:**

- Large: 300H x 300W x 10mm Lead.
- Small: 300H x 150W x 10mm Lead
- Corner: 300H x 150W x 10mm Lead

Custom sizes and designs available upon request

Small MIBS
Large MIBS
Corner MIBS

### Viewing Barrier Surround Shielding

Constructed of powder coated steel and 10mm lead, the new viewing barrier surround shielding is designed to be able to be fitted to any Inderlec Viewing barrier. This can easily be done by the site.

The shielding consists of 10mm lead and provides a complete shielded enclosure which reduces or eliminates potential irradiation to areas beside or behind the dose drawing area.

Special lipped sections on the base of the shield allow the unit to be slipped into place without moving the viewing barrier itself.
